Portfolio

Education

National Institute of Technology, Kurukshetra

Bachelor of Technology in Computer Science (CGPA: 8.88 / 10.00)

Aug 2021 - May 2025

Kurukshetra, Haryana

K-KEY Public School

Class: XII HP Board of senior secondary education (Percentage: 86.8 / 100.00)

Apr 2018 - May 2020

Himachal Pradesh

DAV Public School

Class: X CBSE (Percentage: 94.50 / 100.00)

Apr 2016 - Apr 2018

Himachal Pradesh

Experience

Ernst & Young

Software Engineer

June 2025 – current

Bangalore, Karnataka

- Full stack developer in Internal Products Engineering Team. Skills: C#, Python, Angular, Backend, SQL, Java
- Invested significant efforts in database design and management. Utilizing relational databases like MySQL and NoSQL databases like MongoDB to store and retrieve data efficiently.
- Enforced TypeScript best practices, resulting in decrease in website loading time from 4 seconds to 2.6 seconds and reducing throttling issues by 30% for over 348 components

Paytm

Software Engineering intern (Java)

April 2024 – May 2024

Remote

- Resolved bugs and managed SQL database entries in the Payments backend team using CLI, working with MVC Architecture, RESTful HTTPS, and implementing a middleware layer to authenticate and authorize users, well as handling protected routes.
- Optimized API performance by 10%, integrated caching mechanisms (Redis) and improving database query efficiency with indexing, reducing response time for high-traffic payment workflows.

TrueGTM

Software Engineer Intern

May 2023 – Aug 2023

Bangalore, Karnataka

- Developed a credit score prediction model with an accuracy rate of 85%, based on customer data and clustering results, which improved loan approval efficiency by 20%.
- Developed a mobile app on the Flutter framework, which increased access to agricultural information
- Optimized backend services for scalability using microservice patterns and database indexing..

Projects

Landscape Change Detection | Python, TensorFlow, Keras, OpenCV

Repository

- Developed convolutional neural networks (CNNs) to analyze satellite imagery, achieving 92% accuracy in identifying significant changes over time.
- Implemented data augmentation techniques like random flipping, increasing training dataset variability by 50%.
- Considered two primary use cases: 1) Buildings and 2) Deforestation.

Real-Time Chat Application | NextJS, TypeScript, Express, Convex, WebSocket, SocketIO, Java

Repository

- Made a Real-time chat application using **Next.js**, integrated with **Convex** and **Zego**, achieving **25% faster communication and media streaming** compared to traditional setups.
- Implemented webhooks for real-time updates, reducing latency by **40%**, ensuring near-instantaneous message delivery and interaction.
- Added a **fake news detection model** within the chat. (fine tuned model)
- Deployed using containerization (Docker) and CI/CD pipeline ensuring safe rollouts.

Technical Skills

Languages: C#, Python, C++, Java, JavaScript, SQL, TypeScript, Bash/Shell scripting

Technologies: React.js, Flask, Microservices, Azure, Express.js, TensorFlow, PyTorch, Node.js, Android SDK, Git, LATEX

Concepts/Course Work: Operating System, Machine Learning, Neural Networks, API, Full Stack development, Distributed Computing, Cloud, Microservices, Load Balancing

Achievements

Hackathons Adobe Gensolve and Walmart Sparkathon, top 10% among all teams. Developed software solution for problem statements.

JEE Mains Secured an All-India Rank 5645, JEE Mains 2021 among over 1 million aspirants.

Competitive Programming Pupil in Codeforces, Top 8% (1850) on Leetcode solved 2000 problems over both platforms.

SIH 2023 Finalist: Developed a solution prototype for problem "Change detection due to human interference" (**A ISRO Project**)
